### **Demolition contractor announced for EBAC project**

Following an extensive national tender and evaluation process, Energy Brix Australia Pty Ltd (EBAC) has selected Delta Group as the lead contractor for the Morwell Power Station demolition project.

Tenders were released in June last year which was followed by a detailed tender evaluation process that EBAC Site Remediation General Manager, Barry Dungey, said enabled a thorough review of submissions and ensured that all aspects of the likely challenges within this project were fully explored.

“Following inspections of a range of large demolition projects across Australia, including large demolition activities involving asbestos removal, Delta have proven themselves to be a safe and competent demolition contractor that meets the needs of our site,” Mr Dungey explained.

The site will now be mobilised and Safe Work Method statements and procedures will be developed to prepare for the demolition. Demolition activity is expected to commence in early January following the selection of key support contractors and the recruitment of local employees that will be used on the project.

With its head office based in Melbourne, Delta Group Director of Operations, Jason Simcocks, said he was proud to have been awarded the lead contractor role for EBAC after such a thorough tender and evaluation process.

“Delta Group’s inaugural project was in the Latrobe Valley nearly 40 years ago and we’ve retained a strong affinity with the region,” Mr Simcocks said. “Our people and plant have been deployed across a number of sites and projects in recent years and we look forward to working with EBAC and the local community to assemble a workforce that will deliver a high quality, safe and environmentally responsible works program.”

Delta Group is one of the largest diversified contractors in the world today, offering single source project management solutions involving civil and demolition works, recycling and hazardous waste

removal, materials solution and waste management, environmental management services, specialist design and construction, and heavy plant or equipment rental.

Delta Group employs more than 700 staff and operates Australia's largest fleet of privately owned and highly specialised plant and equipment. With more than 40 years' experience, Delta Group has the scale and triple certified management systems to synchronise their services, personnel and plant to meet the demands of industrial and commercial projects in any location – Australia wide.

Before demolition works commence, a public meeting will be held in Morwell to explain how the project will be undertaken that Mr Dungey said was an invaluable opportunity for the community to speak directly with all of those involved in the project. A date for the meeting will be announced in the coming weeks.

EBAC and Delta Group representatives also plan to visit neighbouring property landholders of Morwell Power Station as part of the consultation process.

In the meantime, people are reminded that any questions or concerns they may have can be submitted via the EBAC demolition website at [ebacdemolition.com.au/contact-us/](http://ebacdemolition.com.au/contact-us/). These will be responded to in a timely manner.
